1. INTRODUCTION

Definition 1.0.1. *We define*

$$\mathcal{D}(\mathbb{R}^n) = \{f \in L^1(\mathbb{R}^d) : f \geq 0 \text{ and } \|f\|_1 = 1\}$$

2. SAMPLING

2.1. Inverse CDF Sampling.

2.2. Importance Sampling.

2.3. Rejection Sampling.

Exercise 2.3.1. *Let $f, g \in \mathcal{D}(\mathbb{R}^d)$ and $A \in \mathcal{B}(\mathbb{R}^d)$. Suppose that $m^d(A) > 0$. If $X \sim f$, then $X|X \in A \sim \|fI_A\|_1^{-1}fI_A$.*

Proof. Let $C \in \mathcal{B}(\mathbb{R}^d)$. Then

$$\begin{aligned} P(X \in C|X \in A) &= P(X \in C \cap A)P(X \in A)^{-1} \\ &= \|fI_A\|_1^{-1} \int_C fI_A dm^d \end{aligned}$$

So $f_{X|X \in A} = \|fI_A\|_1^{-1}fI_A$. □

Exercise 2.3.2. *Let $A, B \in \mathcal{B}(\mathbb{R}^d)$. Suppose that $A \subset B$ and $0 < m^d(A)$ and $m^d(B) < \infty$. If $X \sim \text{Uni}(B)$, then $X|X \in A \sim \text{Uni}(A)$.*

Proof. Clear using the previous exercise with $f = I_B$. □

Exercise 2.3.3. (Fundamental Theorem of Simulation):

Let $f \in \mathcal{D}(\mathbb{R}^d)$ and $c > 0$. Define

$$G_c = \{(x, v) \in \mathbb{R}^{d+1} : 0 < v < cf(x)\}$$

(1) *If $X \sim f$ and $U \sim \text{Uni}(0, 1)$ are independent, then $(X, cUf(X)) \sim \text{Uni}(G_c)$.*

(2) If $(X, V) \sim \text{Uni}(G_c)$, then $X \sim f$.

Proof. First we note that $m^{d+1}(G_c) = c$.

(1) Suppose that $X \sim f$ and $U \sim \text{Uni}(0, 1)$ are independent and put $Y = cUf(X)$. Then $Y|X = x \sim cUf(x) \sim \text{Uni}(0, cf(x))$ and we have that for each $x \in \text{supp } X$ and $y \in (0, cf(x))$,

$$\begin{aligned} f_{X,Y}(x, y) &= f_{Y|X}(y|x)f(x) \\ &= \frac{1}{cf(x)}f(x) \\ &= \frac{1}{c} \end{aligned}$$

So $(X, Y) \sim \text{Uni}(G_c)$

(2) Suppose that $(X, V) \sim \text{Uni}(G_c)$. Then $f_{X,V}(x, v) = \frac{1}{c}I_{G_c}(x, v)$. So

$$\begin{aligned} f_X(x) &= \int_{\mathbb{R}} \frac{1}{c}I_{G_c}(x, v)dm(v) \\ &= \int_0^{cf(x)} \frac{1}{c}dv \\ &= f(x) \end{aligned}$$

So $X \sim f$.

□

Exercise 2.3.4. Let $f, g \in \mathcal{D}(\mathbb{R}^d)$, $c_f, c_g > 0$ and $M > 0$. Put $\tilde{f} = c_f f$ and $\tilde{g} = c_g g$. Suppose that $\tilde{f} \leq M\tilde{g}$. If $Y \sim g$ and $U \sim \text{Uni}(0, 1)$ are independent, then $Y|U \leq \frac{\tilde{f}(Y)}{M\tilde{g}(Y)} \sim f$ and $P(U \leq \frac{\tilde{f}(Y)}{M\tilde{g}(Y)}) = \frac{c_f}{c_g M}$

Proof. Put

$$G_g = \{(y, v) \in \mathbb{R}^{d+1} : 0 < v < M\tilde{g}(y)\}$$

and

$$G_f = \{(y, v) \in \mathbb{R}^{d+1} : 0 < v < \tilde{f}(y)\}$$

Then $G_f \subset G_g$, $m^d(G_g) = c_g M$ and $m^d(G_f) = c_f$. By the first part of the fundamental theorem of simulation, we know that

$$(Y, MUc_g g(Y)) \sim \text{Uni}(G_g)$$

Since $\{(Y, MUc_g g(Y)) \in G_f\} = \{U \leq \frac{c_f f(Y)}{M c_g g(Y)}\}$, a previous exercise tells us that

$$(Y, MUc_g g(Y))|U \leq \frac{c_f f(Y)}{M c_g g(Y)} \sim \text{Uni}(G_f)$$

Then the second part of the fundamental theorem of simulation tells us that

$$Y|U \leq \frac{c_f f(Y)}{M c_g g(Y)} \sim f$$

Finally we have that

$$\begin{aligned} P\left(U \leq \frac{c_f f(Y)}{M c_g g(Y)}\right) &= P[(Y, M U c_g g(Y)) \in G_f] \\ &= \frac{c_f}{c_g M} \end{aligned}$$

□

Definition 2.3.5. (Rejection Sampling Algorithm):

Let $f, g \in \mathcal{D}(\mathbb{R}^d)$, $c_f, c_g > 0$ and $M > 0$. Put $\tilde{f} = c_f f$ and $\tilde{g} = c_g g$. Suppose that $\tilde{f} \leq M \tilde{g}$. We define the **rejection sampling algorithm** as follows:

- (1) sample $Y \sim g$ and $U \sim \text{Uni}(0, 1)$ independently
- (2) if $U \leq \frac{\tilde{f}(Y)}{M \tilde{g}(Y)}$, accept Y , else return to (1).

If we sample $(X_n)_{n \in \mathbb{N}}$ independently using the rejection sampler, then the previous exercises imply that $(X_n)_{n \in \mathbb{N}} \stackrel{iid}{\sim} f$ and the acceptance rate is $\frac{c_f}{c_g M}$.

Note 2.3.6. Phrasing the rejection sampler in terms of \tilde{f} and \tilde{g} instead of f and g is useful because we may not always be able to solve for the normalizing constants.
