#### 1. Introduction

**Definition 1.0.1.** We define

$$\mathcal{D}(\mathbb{R}^n) = \{ f \in L^1(\mathbb{R}^d) : f \ge 0 \text{ and } ||f||_1 = 1 \}$$

#### 2. Sampling

- 2.1. Inverse CDF Sampling.
- 2.2. Importance Sampling.
- 2.3. Rejection Sampling.

**Exercise 2.3.1.** Let  $f, g \in \mathcal{D}(\mathbb{R}^d)$  and  $A \in \mathcal{B}(\mathbb{R}^d)$ . Suppose that  $m^d(A) > 0$ . If  $X \sim f$ , then  $X|X \in A \sim ||fI_A||_1^{-1} fI_A$ .

*Proof.* Let  $C \in \mathcal{B}(\mathbb{R}^d)$ . Then

$$P(X \in C | X \in A) = P(X \in C \cap A)P(X \in A)^{-1}$$
$$= ||fI_A||_1^{-1} \int_C fI_A dm^d$$

So 
$$f_{X|X\in A} = ||fI_A||_1^{-1} fI_A$$
.

**Exercise 2.3.2.** Let  $A, B \in \mathcal{B}(\mathbb{R}^d)$ . Suppose that  $A \subset B$  and  $0 < m^d(A)$  and  $m^d(B) < \infty$ . If  $X \sim \mathrm{Uni}(B)$ , then  $X | X \in A \sim \mathrm{Uni}(A)$ .

*Proof.* Clear using the previous exercise with  $f = I_B$ .

Exercise 2.3.3. (Fundamental Theorem of Simulation):

Let  $f \in \mathcal{D}(\mathbb{R}^d)$  and c > 0. Define

$$G_c = \{(x, v) \in \mathbb{R}^{d+1} : 0 < v < cf(x)\}$$

(1) If  $X \sim f$  and  $U \sim \text{Uni}(0,1)$  are independent, then  $(X, cUf(X)) \sim \text{Uni}(G_c)$ .

(2) If  $(X, V) \sim \text{Uni}(G_c)$ , then  $X \sim f$ .

*Proof.* First we note that  $m^{d+1}(G_c) = c$ .

(1) Suppose that  $X \sim f$  and  $U \sim \text{Uni}(0,1)$  are independent and put Y = cUf(X). Then  $Y|X = x \sim cUf(x) \sim \text{Uni}(0,cf(x))$  and we have that for each  $x \in \text{supp } X$  and  $y \in (0,cf(x))$ ,

$$f_{X,Y}(x,y) = f_{Y|X}(y|x)f(x)$$
$$= \frac{1}{cf(x)}f(x)$$
$$= \frac{1}{c}$$

So  $(X,Y) \sim \mathrm{Uni}(G_c)$ 

(2) Suppose that  $(X, V) \sim \text{Uni}(G_c)$ . Then  $f_{X,V}(x, v) = \frac{1}{c}I_{G_c}(x, v)$ . So

$$f_X(x) = \int_{\mathbb{R}} \frac{1}{c} I_{G_c}(x, v) dm(v)$$
$$= \int_0^{cf(x)} \frac{1}{c} dv$$
$$= f(x)$$

So  $X \sim f$ .

**Exercise 2.3.4.** Let  $f, g \in \mathcal{D}(\mathbb{R}^d)$ ,  $c_f, c_g > 0$  and M > 0. Put  $\tilde{f} = c_f f$  and  $\tilde{g} = c_g g$ . Suppose that  $\tilde{f} \leq M\tilde{g}$ . If  $Y \sim g$  and  $U \sim \mathrm{Uni}(0,1)$  are independent, then  $Y|U \leq \frac{\tilde{f}(Y)}{M\tilde{g}(Y)} \sim f$  and  $P(U \leq \frac{\tilde{f}(Y)}{M\tilde{g}(Y)}) = \frac{c_f}{c_o M}$ 

*Proof.* Put

$$G_q = \{ (y, v) \in \mathbb{R}^{d+1} : 0 < v < M\tilde{g}(y) \}$$

and

$$G_f = \{(y, v) \in \mathbb{R}^{d+1} : 0 < v < \tilde{f}(y)\}$$

Then  $G_f \subset G_g$ ,  $m^d(G_g) = c_g M$  and  $m^d(G_f) = c_f$ . By the first part of the fundamental theorem of simulation, we know that

$$(Y, MUc_gg(Y)) \sim \text{Uni}(G_g)$$

Since  $\{(Y, MUc_gg(Y)) \in G_f\} = \{U \leq \frac{c_ff(Y)}{Mc_gg(Y)}\}$ , a previous exercise tells us that

$$(Y, MUc_gg(Y))|U \le \frac{c_ff(Y)}{Mc_gg(Y)} \sim \text{Uni}(G_f)$$

Then the second part of the fundamental theorem of simulation tells us that

$$Y|U \le \frac{c_f f(Y)}{M c_g g(Y)} \sim f$$

Finally we have that

$$P\left(U \le \frac{c_f f(Y)}{M c_g g(Y)}\right) = P[(Y, M U c_g g(Y)) \in G_f]$$
$$= \frac{c_f}{c_g M}$$

# Definition 2.3.5. (Rejection Sampling Algorithm):

Let  $f, g \in \mathcal{D}(\mathbb{R}^d)$ ,  $c_f, c_g > 0$  and M > 0. Put  $\tilde{f} = c_f f$  and  $\tilde{g} = c_g g$ . Suppose that  $\tilde{f} \leq M\tilde{g}$ . We define the **rejection sampling algorithm** as follows:

- (1) sample  $Y \sim g$  and  $U \sim \text{Uni}(0,1)$  independently
- (2) if  $U \leq \frac{\tilde{f}(Y)}{M\tilde{g}(Y)}$ , accept Y, else return to (1).

If we sample  $(X_n)_{n\in\mathbb{N}}$  independently using the rejection sampler, then the previous exercises imply that  $(X_n)_{n\in\mathbb{N}} \stackrel{iid}{\sim} f$  and the acceptance rate is  $\frac{c_f}{c_g M}$ .

Note 2.3.1. Phrasing the rejection sampler in terms of  $\tilde{f}$  and  $\tilde{g}$  instead of f and g is usefule because we may not always be able to solve for the normalizing constants.
